Flat Panel Glare Filter

The best protection for computer-weary eyes

Flat Panel Filter

Our Flat Panel Filters are specifically designed for today's high-resolution monitors to minimize glare and improve contrast. The optional privacy feature allows data to be clearly read in front of the monitor, yet blurs the screen when viewed from an angle.

Our filters are made with doublesided, multiple-layer, anti-reflective coating on optical glass. There's just no comparison to less expensive options.

"...using an optical glare filter is one of the most effective things you can do to improve the visual environment for people working on computers."

— Alan Hedge, Ph.D., Cornell University

Features

- Easy installation using adjustable brackets
- Six layers of superior optical coating on each side reduce up to 99% of glare and reflections
- Coatings are molecularly bonded to glass, using vacuum deposition technology
- Minimalist design maintains monitor aesthetic
- Meets American Optometric Association requirements for long-term eye protection
- Privacy option protects data for HIPAA compliance, Human Resources and other monitors on which sensitive data is displayed

Specifications

- Fits 15" to 21" monitors
- Fits monitors up to 2" thick
- UV Shielding: 95%; UVA: 77.4%; UVB: 100%
- Optical Qualities: Photopic reflectance of .25% or less
- Durability: Meets or exceeds all applicable requirements of MIL-C-675, MIL-C-48497, MIL-C-14806A
- Optional privacy film version blurs screen when viewed from more than 25° to the side
